SUMMARY

Software engineer with 4+ years building full-stack and backend systems in Python and Java, with production experience integrating Generative AI (LLMs, RAG, multi-agent orchestration, evals) into customer-facing applications. Strong in cloud-native deployment, observability, and full product lifecycle ownership.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks: React, Redux, Node.js, Express.js, Spring Boot, FastAPI, Flask, TailwindCSS, Bootstrap, JUnit, PyTest, Selenium

Generative AI: Anthropic Claude API, OpenAI API, LangChain, LangGraph, RAG, multi-agent orchestration, agentic workflows, MCP servers, embeddings, vector search, LLM evaluation, prompt engineering, fine-tuning, Hugging Face

Libraries: Pandas, NumPy, SciPy, Matplotlib, Seaborn, Scikit-learn, XGBoost, PyTorch, TensorFlow, Transformers

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, pgvector

AWS Services: EC2, Lambda, S3, EBS, RDS, EKS, ECS, Fargate, API Gateway, CloudFormation, CloudWatch, SQS, SNS, IAM, VPC, Secrets Manager

DevOps & Tools: Docker, Kubernetes, Helm, Terraform, Jenkins, Ansible, GitHub Actions, GitLab CI/CD, Prometheus, Grafana, Git, Maven, Gradle, Postman

Architecture & Practices: Microservices, RESTful APIs, Distributed Systems, Event-Driven Architecture, System Design, Test-Driven Development, Agile/Scrum, Object-Oriented Design, OAuth/JWT, Data Structures & Algorithms

Environment & Shell: Unix, Linux, Bash

EXPERIENCE

Software Developer

Sept 2025 – Mar 2026

Panasia Estate Pvt Ltd.

New York, USA

- Built full-stack property platform (React/TS/Node) + Java/Spring Boot/Python microservices on AWS, tuning APIs 35%
- Integrated GenAI via Claude API and a RAG pipeline for automated document parsing, cutting processing time 50%
- Instrumented model-serving with latency tracing and per-request LLM cost tracking to surface bottlenecks and control spend
- Built CI/CD (GitHub Actions) and Dockerized EKS with CloudWatch monitoring and on-call response, 99%+ uptime

Software Developer

Feb 2025 – June 2025

MarlnCorp

California, USA

- Shipped a production LMS web app in React/TailwindCSS on tight agile cycles with responsive, mobile-first layouts
- Architected fault-tolerant AWS deployment (EC2, EKS) with auto-scaling and load balancing, cutting infrastructure cost 30%
- Built a reusable React component library and design system, standardizing UI and speeding feature development
- Designed REST APIs and PostgreSQL schemas powering the LMS, with JWT auth and role-based access control

Software Developer

Sept 2023 – July 2024

iNeuron.ai

Bengaluru, IN

- Delivered client-requirement features across React frontend and Python/Flask backend, translating specs to shipped solutions
- Contributed to developing the company's website end-to-end, which brought 200+ customers onto the site
- Designed workflows and features improving operational efficiency, with PyTest suites raising coverage by 10%
- Integrated payment and OAuth APIs for secure checkout and streamlined user onboarding across the platform
- Implemented Redis caching to cut database load and reduce page latency on high-traffic pages

Software Developer

Aug 2021 – July 2023

Zoho Corporation

Chennai, IN

- Built Zoho Expense-Payroll integration using Java and Spring Boot, acquiring 100+ new Payroll customers
- Main contributor in setting up Continuous Integration system in Zoho Books repository using GitLab CI/CD
- Reduced recurring production incidents 30% by root-causing abnormalities and coordinating timely fixes across teams
- Developed SQL integrity queries to monitor and fix database-related integrity issues at scale
- Designed feature flags and rollout safeguards to deploy integration changes incrementally without disrupting current customers
- Tuned query execution and concurrency for high-load Payroll operations, improving throughput and reducing contention
- Refactored legacy Java/Spring Boot modules with added unit tests, reducing production defects and tech debt
- Built internal scripts to automate routine integration and data-validation tasks, reducing manual effort

PROJECTS

NYC Real Estate Intelligence — End-to-End ML Pipeline | *Python, Scikit-learn, Claude, XGBoost*

May 2026

- Built ML pipeline classifying NYC properties as undervalued, fairly valued, or overvalued using public civic APIs
- Engineered bulk-prefetch SoQL ingestion across Census, NYPD, NYC DOE, and Walk Score datasets
- Trained an XGBoost classifier (ROC-AUC 0.69) with a full feature-engineering and evaluation pipeline
- Built a hybrid recommender and Claude-powered conversational agent for natural-language queries over the dataset

CodeSage — Agentic Code Review Assistant | *Python, FastAPI, LangGraph, Claude, AWS, pgvector*

Mar 2026

- Built Claude-powered multi-agent PR review system on LangGraph (ReAct + self-reflection), cutting review turnaround 40%
- Engineered a pgvector RAG pipeline on PostgreSQL and an LLM-as-Judge eval harness with cross-version regression detection
- Containerized and deployed on AWS (Lambda + ECS) with token-cost telemetry, exposing agents via REST and MCP
- Implemented parallel security, correctness, and style reviewer agents with sandboxed tests and human-in-the-loop gates

EDUCATION

Stevens Institute of Technology

Hoboken, NJ

Master of Science in Computer Science

Aug 2024 – May 2026
