SUMMARY

Full-stack engineer with 4+ years across React/TypeScript front ends, Java/Spring Boot and Python/FastAPI back ends, and AWS. Built consumer finance software at Zoho (Books, Expense, Payroll) winning 100+ customers. Ships production GenAI: RAG pipelines, multi-agent systems, and LLM evals. Cut production incidents 30%, on-call at 99%+ uptime.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++, HTML5, CSS3, Bash
Frontend & Mobile: React, React Native, Next.js, Vue.js, Angular, TypeScript, TailwindCSS, Vite, responsive web UI
Backend: Spring Boot, FastAPI, Django, Node.js, Express.js, RESTful API design, microservices, serverless, gRPC
Generative AI: RAG pipelines, LangGraph and LangChain agents, tool calling, MCP, prompt engineering, LLM-as-Judge evals
Models & Retrieval: Claude, OpenAI and Gemini APIs, multimodal LLMs, embeddings, pgvector, hybrid BM25 and vector search
Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, schema design, indexing, query tuning
Cloud & Infrastructure: AWS (EC2, Lambda, ECS, EKS, S3, RDS, IAM), Docker, Kubernetes, Terraform, Cloudflare Workers
CI/CD & Testing: Git, GitHub Actions, GitLab CI/CD, Jenkins, feature flags, JUnit, PyTest, Selenium, TDD
Observability & Delivery: CloudWatch, Prometheus, Grafana, OpenTelemetry, on-call, root-cause analysis, Agile/Scrum

EXPERIENCE

GenAI Engineer Intern July 2026 – Present
Presenter Prep Mountain View, CA

- Shipping full-stack features in React/TypeScript against a serverless Node.js backend hosted on Cloudflare
- Built AI Interview Mode: a voice-paced mock interview loop with silence detection, auto-advance, and live feedback
- Split scoring into code-computed metrics (filler words, WPM, pauses) and rubric-grounded LLM structured output
- Built an LLM-as-Judge eval harness rating Gemini native-audio responses, gating prompt changes before release
- Designed a pluggable QuestionProvider interface so curated and user-generated question sets share one contract
- Built a conversational entry point that starts interviews, presentations, or recordings by chat instead of UI clicks
- Delivered an end-to-end AI video processing system for [Santa Clara University](#), shipped for their demo day

GenAI Engineer Intern Sept 2025 – Mar 2026
Panasia Estate Inc. New York, NY

- Shipped a Claude-powered RAG pipeline (chunking, embeddings, vector search), cutting document processing 50%
- Built scalable Python/FastAPI services behind a client-facing real-estate platform, cutting API latency 35%
- Built React/TypeScript interfaces on FastAPI REST endpoints, from UI through to PostgreSQL
- Automated build, test, and deployment with GitHub Actions CI/CD and Dockerized Kubernetes (EKS) releases
- Held on-call at 99%+ uptime with CloudWatch monitoring, alerting, and root-cause incident response

Software Developer Intern Feb 2025 – June 2025
MarlnCorp California, USA

- Led a team of 5 to ship a production LMS end to end, demoing v1 to enterprise clients in the UAE and Saudi Arabia
- Built Java/Spring Boot REST APIs on PostgreSQL with JWT auth, tuning transaction isolation to cut lock contention
- Built the LMS front end in React and TailwindCSS with responsive, mobile-first layouts from UI/UX designs
- Architected fault-tolerant AWS deployment (EC2, EKS) with auto-scaling and load balancing, cutting cost 30%

Software Developer Aug 2023 – July 2024
Wipro Bengaluru, IN

- Built React Native mobile apps on Django cloud APIs with OAuth login, batch jobs, and templated PDF generation
- Automated recurring billing with Razorpay subscription payments, plus user-role and invite management
- Delivered full-stack features across React front ends and Python/Django back ends, raising test coverage 10%
- Built React interfaces on Django REST endpoints with server-side pagination, filtering, and role-gated views
- Built a Jenkins pipeline running CI tests and deploying containers to AWS ECR and EC2 instances

Software Engineer Aug 2021 – July 2023
Zoho Corporation Chennai, IN

- Built the Zoho Expense-Payroll integration using Java and Spring Boot, acquiring 100+ new Payroll customers
- Built ledger-based transaction handling for per diem and expense reimbursement across Payroll and Expense
- Reduced recurring production incidents 30% by root-causing abnormalities and coordinating fixes across teams
- Tuned query execution and concurrency for high-load Payroll operations, improving throughput and cutting contention
- Led setup of the Continuous Integration system for the Zoho Books repository using GitLab CI/CD
- Designed feature flags and rollout safeguards to deploy integration changes incrementally without disrupting customers
- Built Vue.js interfaces for Finance workflows, wiring components to Java/Spring Boot REST endpoints
- Wrote SQL integrity checks that caught and repaired data-integrity issues in production finance datasets
- Refactored legacy Spring Boot modules and backfilled unit tests, cutting repeat defects in the integration
- Conducted code reviews and design discussions across Zoho Finance suite microservices, upholding code quality

PROJECTS

PolicyPal - Cited Answers over Health Policy Docs | *Python, FastAPI, React, pgvector* | [GitHub](#) Jun 2026

- Built a tool-calling retrieval agent that plans its own queries, then cites every claim back to source text
- Fused BM25 and pgvector dense retrieval with cross-encoder reranking, blocking any answer not grounded in context
- Shipped end to end: React/TypeScript UI, async FastAPI services, PostgreSQL/pgvector store, Dockerized

CodeSage - Multi-Agent Code Review Platform | *Python, FastAPI, LangGraph, Claude, AWS* | [GitHub](#) Mar 2026

- Built a LangGraph multi-agent reviewer using ReAct planning and self-reflection, cutting review turnaround 40%
- Sandboxed candidate fixes before proposing them, exposing the agents to any client through an MCP server
- Engineered a pgvector RAG pipeline and LLM-as-Judge evals that catch quality regressions across model versions

EDUCATION

Stevens Institute of Technology Hoboken, NJ
Master of Science in Computer Science Aug 2024 – May 2026
